

Stretch

Under development

Plugwise

The Stretch is a low-power, always-on device that plays a central role in a Plugwise network. The Stretch constitutes the link between the ZigBee modules and the user-interface via TCP/IP (Internet) with optional GPRS / UMTS-connection. The Stretch is equipped with its own software and can be approached remotely and locally by means of a webbrowser.

Connectors:

RJ45 WAN connector (internet)
RJ11 connector for P1 or Puls-port*
USB host port *

SIM-card slot UMTS/GPRS*

*optional

Be wise, plug in.
